

# INTRODUCING ICARE CLINIC – 24 HOUR INSIGHT

---

Icare CLINIC revolutionizes glaucoma treatment by adding a complete solution to IOP monitoring. The Icare HOME tonometer combined with a cloud-based platform makes the IOP collection, transfer and storage accessible anywhere at anytime. Icare CLINIC enables the healthcare professional to make a quick IOP assessment with the statistical reports provided.

Icare's **CLINIC** collects and interprets IOP data, which provides healthcare professionals a better overview of changes in their patients' IOP status. The Icare HOME device allows data collection outside office hours. The device connects to a new, easy-to-use software platform which can be easily accessed by internet browser. All the data is displayed on an intuitive user interface.

## ALL ABOUT DATA

1. Icare **CLINIC** is a great tool for monitoring the effectiveness of a surgical operation. With the Icare HOME device, post surgical monitoring can be started much sooner than with other techniques.
2. Icare **CLINIC**'s built-in trending tools offer a very visual way of monitoring the effectiveness of glaucoma medication. With mHOME, medication adjustments can be made based on accurate and extensive information.
3. With built-in statistical tools, it is easier to monitor patient's IOP providing greater detail for target pressure determination.
